Softwares

I am deeply involved in the free R statistical software community. We organized the useR conference (500 participants) in 2009 in Rennes and I am regularly in PC of useR conferences. I use R for teaching, research, development, consulting, etc. It allows us to make the research reproducible and available for the users of different fields. I am working on the packages:

- FactoMineR dedicated to principal component methods (PCA, Correspondence Analysis for contingency tables, Multiple Correspondence Analysis for categorical data, MFA for multi-blocks data). Google users group and you-tube videos available.
- missMDA to perform principal component methods (PCA, MCA, MFA) with missing values and to impute continuous, categorical and mixed data. Multiple imputation is available.
- denoiseR to approximate a low-rank matrix from noisy data (Gaussian and Poisson Noise). Singular values shrinkage methods are implemented.

I am in the board of the French R committee (organization for coordinating R conferences "Les rencontres R") and I am involved in a task force on behalf of the R Foundation with the aim of increasing the participation of women and underrepresented groups in the R community (<http://forwards.github.io/>). We work for instance on implementation of code of conduct.

In nov 2016, I have been elected as a member of the R foundation (<https://www.r-project.org/>) and of the R Foundation Conference Committee.

With Nicholas Tierney and Nathalie Vialaneix, we have created a platform for missing data (<https://rmisstastic.netlify.com/>) and realised task-view on missing values.

During the Covid Crisis, I have been involved in the ICUBAM Project.

- <https://icubam.github.io/> Creation of an application to visualize in real time covid+ bed availabilities.
